**Leslie Johnson**, *Director Lean & 6 Sigma, Graham Health System*

#### Date

**Wednesday, November 19, 2014 - 12:00PM – 1:30 PM CST**

#### Description

In today's competitive marketplace, significant capital expenditure decisions can make or break a healthcare organization and the career of the executives tasked with such decisions. No capital decision may be greater than the construction of a new facility or the substantial renovation of an existing one.

After years of relative dormancy, the healthcare construction boom continues throughout the U.S. for a variety of reasons, many of which impact both small community hospitals and large urban health systems alike. The most common reasons for the renovations, expansions, and replacements include aging facilities, population growth, market demand, and the need to improve operational efficiencies. Additionally, competition moves organizations to incorporate the latest advances in care delivery, medical technology, new building codes and healing design elements to enhance the patient experience through the surrounding environment. Changes in building codes and patient safety standards also drive the need for construction and modification.

Please join Central Illinois American College of Healthcare Executives and Dave Adcock, Robert Senneff, David Schreiner, Brad Solberg, and Leslie Johnson for this 90-minute panel discussion via webinar. This event will include an opportunity for Q&A.

With this panel discussion, the presenters will provide insight to the following questions:

- What factors influence the executive's decision to utilize limited financial resources for their organization's physical plant?
- How would a new or updated facility enhance (or hinder) current operations or market share?
- Would renovating and expanding the current facility be easier, take less time and cost less than new construction?
- How will the "Green Movement" impact future facility planning?
