6:15 - 6:30 PM - Chapter Updates  
6:30 - 7:30 PM - Presentation  
7:30 – 8:00 PM - Questions and Answers

Today's healthcare executive works in a world of ever-increasing information technology options. How do they navigate, evolve and respond to the changing informatics world? These leaders often do not work directly with information technology, nor necessarily understand the application, but they are asked to make crucial decisions about implementation of technology. The outcomes of those decisions have financial, strategic and patient outcomes and the cost of a mistake can be devastating. Is there a methodology or a roadmap to assist non-technical executives to proactively make technology decisions? Please join the Central Illinois American College of Healthcare Executives and Leslie Johnson, Karen Brown, James Mormann, Chris Duvendack, and Dan Thoma for this 90-minute face-to-face panel discussion including Q&A on the *Healthcare Executive's Role in IT Decisions*.

With this panel discussion, you will gain insight into:

- The processes you use in making decisions on implementing new technologies or technological approaches
- The key stakeholders and their respective roles
- The method for making decisions on topics for which you do not have a complete understanding
- Understanding the relationship between IT decision and technology partners
- Separating the technology facts from the technology fads
- The role of managers and other employees play in IT decision-making

*As an independent chartered Chapter of the American College of Healthcare Executives Central Illinois Chapter of ACHE is authorized to award 1.5 hour of Qualified continuing education credit toward advancement or recertification in the American College of Healthcare Executives.*
